Conflict Minerals Policy Statement

As a global distributor of electronic components traceability of the supply chain is paramount to Rebound Technology Group. This extends to the traceability of Conflict Minerals.
Rebound Technology Group are aware of the conflict minerals reporting obligations legislated by Section 1502 of the U.S. Dodd-Frank Wall Street Reform Act.
We recognise our responsibility not to support or contribute to the violence and human rights violations associated with the mining of certain materials in central Africa and we have established a Conflict Mineral Program to that effect.

Rebound is not a manufacturer of electronics parts and therefore is not in a position to provide accurate information relating to the use of conflict minerals in the products it distributes. The manufacturers of the electronic components and products are the only source of accurate information regarding any conflict minerals that may have been used in the manufacture of their products.
For information on specific components, we suggest that you consider subscribing to databases such as www.accuristech.com (formerly IHS) as they work directly with component and product manufacturers to obtain conflict minerals data. Information regarding conflict minerals is available in the IHS database.
As a purchaser Rebound is many steps removed from the mining of conflict minerals. We do not purchase raw ore or unrefined conflict minerals, and we do not knowingly procure any parts containing conflict minerals from the covered countries.

Rebound endeavours not to purchase products that contain conflict minerals that directly or indirectly finance or benefit armed groups in the DRC or adjoining countries. Rebound fully understands the importance of this issue to its customers and is committed to supply chain initiatives and overall corporate social responsibility and sustainability efforts that work towards a conflict free supply chain. We will design and implement any necessary and required processes to facilitate compliance.
