General Market Insight

- Severe flooding in Malaysia is affecting manufacturing:
 - NDK's plant which manufactures quartz crystal products for automotive, 5G, and IoT applications, was entirely inundated, and it will take time to resume operations, according to reports.
 - STMicroelectronics' consolidated packaging facility located in Muar.
 - BE Semiconductor, which supplies chipmaking equipment to companies like Foxconn, STMicroelectronics, ASE, Micron, and LG Innotek, ceased operations due to massive flooding at its factory in Shah Alam, Malaysia. It expects a loss of \$28 million as a result of the disruption.
- PC processor prices are expected to climb significantly this year as a result of growing foundry costs, putting more pressure on downstream clients to hike pricing.
- Despite chip shortages and supply chain challenges, semiconductor companies will achieve new revenue highs this year, according to reports. For the first time, the industry is expected to earn over \$600 billion globally, despite an anticipated slowing in growth.
- The current conflict between Russia and Ukraine has the potential to raise chip material prices by 600%. Palladium, Helium, Neon, and Scandium are among the chip-making elements sourced from the region. Sanctions against Russian shipments of commercial electronics, aircraft parts, and semiconductors have been announced by the US and other countries.
- According to Susquehanna Financial Group (SFG), the overall product average lead time is currently 25.8 weeks, which is 10 weeks longer than the 2018 MLCC shortage, when the number of MLCCs was at an all-time high. The 25.8-week high is the result of a slew of supply-chain issues that have affected manufacturers over the past almost 2 years, including factory closures due to COVID-19, extreme weather, geopolitical events, and more.
- Logistics costs have climbed 4-5 times over the industry average for the average supplier, adding to commodity price hikes. Because operations in typical lower-cost manufacturing zones have become unreliable, customers have been forced to manufacture in higher-cost areas, driving up overall production costs. In the year 2022, manufacturers are anticipated to continue to play catch-up in order to meet client demand.
- On April 4th, Spanish Prime Minister Pedro Sanchez said that the government will spend 11 billion euros in the microchip and semiconductor businesses. The investment will be marketed as part of one of the PERTES (Spanish Economic Recovery and Transformation Strategic Projects), which will draw European funding to attract private investment.

- The US has imposed new sanctions on Semiconductor Manufacturing International Corp. (SMIC), which was blacklisted by the US in 2020. This is likely to exacerbate tensions between China and the United States in the ongoing trade war, which has resulted in higher shipping and production costs as a result of tariffs. Mobile gadgets, video game consoles, and automobile parts will all be affected by these extra penalties. The sanctions will have an impact on Applied Materials Inc., KLA Corp., and Lam Research, who provide SMIC with parts for semiconductor constructions.
- Lead times for many automotive grade and industrial ICs have been extended up to 70 weeks due to continuous industry-wide supply constraints.
- Upbeat earnings forecast for Samsung, SK hynix in Q1. Samsung Electronics Co. and SK hynix Inc., the world's two largest memory chip makers, are forecast to report robust earnings in the first quarter, despite a hike in raw material prices and continued global supply woes, a financial data firm said Tuesday. Samsung is estimated to log 13.89 trillion won (\$11.3 billion) in operating profits in the three months ending March 31, up 38.64 percent from a year ago, while SK hynix is expected to top 3.1 trillion won, up 137.08%.
- Daimler Truck cuts production at some locations over chip shortage. The company, which was spun off from Mercedes-Benz last year, said it was suspending production in some areas at its Mannheim site in March and at its Gaggenau plant in April, without giving further details. According to previous reports, Martin Daum, head of Daimler Trucks, predicted that a global chip shortage in 2021 would reduce Daimler Trucks revenue by billions of euros, and believed the problem would continue until 2022. Industry insiders also believe that the shortage of automotive chips will continue until 2022, especially chips produced on 8-inch wafers may not ease until 2025.
- Taiwan diode, MCU makers eyeing automotive market. Taiwan-based diode and MCU makers have stepped up their deployments for the automotive market recently, eyeing future opportunities presented by the rapid development of electric vehicles (EVs). Despite uncertainties caused by automotive chip shortages and supply chain disruptions this year, the global automotive electrification trend remains clear. Major IDMs such as STMicroelectronics, Infineon, Onsemi, Renesas, Rohm and NXP have all installed production capacity for automotive products, while Taiwan-based power component suppliers have adjusted operation strategies in response to the future vehicle progress.

AMD

- According to reports, AMD's EPYC data processors are going up in price. Prices are increasing by 10-30%.

Analog Devices

- Due to an increase in material costs Analog devices have introduced price increases of 6-20% across products and shortages are to occur on the following parts: ADM, ADC, AD8602, AD860 series

BOSCH

- Bosch sensor lead times have begun to stretch, with low-power application sensors targeted for smartphones and wearables bearing the brunt of the impact. Customers seeing little support from BOSCH. The affected series includes **BMA253, BMA400, BMA456, BMA422.**

Diodes Inc.

- TVS Diodes, SMxxx series have a lead time of 32-50 weeks or above. Due to wafer shortages, production capacity is limited

Infineon

- Large-scale shortages are occurring in Infineon's automotive and industrial series. The lead time has increased to 60 weeks.
- Infineon is investing more than EUR 2 billion to construct a third module at its Malaysian facility in Kulim.

Intel

- Pricing for Intel SSDs is expected to increase by 20-30%. Following series are likely to be affected: S4620 480G, S4510240G, S4510 480G, S4510 960G
- Intel's Enpirion power solutions series is being phased out, causing a surge in demand. The power management devices are used for FPGAs, SoCs, CPUs, ASICs and more. The official notice announces a LTB of March 18, 2022 (orders become non-cancellable, non-reschedule, non-returnable on this date). The last time shipment date is March 31, 2023 (contingent on global supply).

Klauke

- On February 15th, 2022, Klauke implemented a blanket 4% price increase across the board on all of their products.

Lattice

- The average lead time is at 40-50 weeks. This is due to wafer shortages and disruptions at Lattice's Malaysian facility.

Maxim

- Due to the delay in ADI's acquisition of Maxim Integrated, lead times for some Maxim products have reportedly increased to 90 weeks, while the lead time for Maxim's DS series has increased to 70 weeks.

Micron

- Micron Posts Strong Forecast as Data Centres Fuel Chip Sales. Sales will be about \$8.7 billion in its fiscal third quarter, Micron said in a statement. That compares with an average analyst estimate of \$8.2 billion, according to data compiled by Bloomberg. Excluding certain items, profit will be about \$2.46 a share, topping the \$2.24 prediction.

Monolithic Power Systems

- MPS lead times now average 72+ weeks with major supply restrictions projected to continue in the first quarter. In February prices were increased by up to 20%

Nexperia

- Nexperia enters analog IC market. Nexperia recently opened its first design center in North America to support the new power management and analog chip business units. The new business unit will develop chips with voltage regulators and data converters to complement its discrete power devices.

NXP

- The price of NXP's automotive parts has increased by 20%. By June 2022, another price hike of 30% is planned.
- A recent mandatory COVID-19 lockdown has impacted NXP Tianjin, its China production facility that focuses mostly on MCIMX series MCUs. As a result, lead times for automobile parts may extend beyond the existing 52-week time frame.

Onsemi

- As demand surpasses output capacity, Onsemi's FDN series MOSFETs are severely limited. Customers are unlikely to receive allocation until 2023.
- Onsemi's small size SOT packages are currently crucial with 90-week lead times.

Qualcomm

- ARxx Series, QCCxx Series, and CSRxx Series are expected to increase in price up to 21%

Renesas

- On March 16, parts of Japan were rocked by an earthquake, prompting Renesas to shut down its three Japanese factories: Naka, Takasaki, and Yonezawa. The shutdown of many facilities, as a key manufacturing contributor to the automotive industry, caused supply chain delays. Production capacity was returned to pre-earthquake levels March 23.

Samsung

- The government lockdown in the Chinese city of Xi'an due to COVID-19 has caused supply chain delays at Samsung factories. Samsung's Xi'an factory produces 40% of the its NAND capacity and 15% of all NAND produced worldwide. Since releasing an official statement on Dec. 29, 2021, Samsung has not commented on its present operation capacity in Xi'an during the city's lockdown.

STMicroelectronics

- ST Micro raised prices by 16-30% across the board, with lead times ranging from 16-70 weeks. It is reported that pricing will continue to raise on all product lines, including existing backlog, in the second quarter of 2022. Customers are not expected to receive deliveries until Q4 2022 or Q1 2023 on all series. STM32 is particularly impacted, and spot buy price is increasing for STM32F4 & STM32H7 series.

TDK

- Due to US-China trade clash, TDK film capacitors has a lead time of up to 52 weeks.

Torex

- Price increase notice on their products in response to the soaring costs of various raw materials for wafers and packaging.

Toshiba

- Toshiba is expected to face further strains as it examines damage to production facilities after experiencing two earthquakes this year. Lead times have been reported to be as long as 1-2 years. On March 22, the company resumed full-scale production.

TSMC

- Component prices are expected to be affected by TSMC's 10-20% rise in mature and advanced nodes, as well as the continued silicon shortages, until later this year.

Vishay

- Due to issues allocating materials for capacitor builds, as well as delays from the US-China trade war, Vishay's film capacitors have a lead time of up to 50 weeks now.
- Vishay implemented price increase on all MOSFET, automotive, LVM and HVM packages. Beginning April 7, 2022, this price increase will apply to all backlogged orders.
- Vishay also has production facilities in Ukraine, where geopolitical events have disrupted the supply of diodes and rectifiers.

Western Digital

- There was an unidentified contaminant infiltrated WD's NAND Flash production process, prompting the company's abrupt shutdown. The contamination occurred at two of its factories in Japan at the end of January which are operated by WD's joint venture partner, Kioxia. The disruption is expected to have an influence on NAND Flash pricing in Q2, as well as on SSD market.

Wima

- Wima have a 30 weeks lead time for its film capacitors caused by production delays and disruptions induced by the US-China trade clash.

Xilinx

- Xilinx's XC6 and XC7 series are still incredibly short. According to reports, XC6 production has been decreased by 90%, and the XC7 series lead time is 47-50 weeks. Some delivery dates have been estimated to be as far out as 2024.
- The production capacity of Xilinx remains crucial, with no indications of improvements. As a result, the firm has prioritized global tier 1 customers in its service. Aerospace, military, and the US government are among the sectors that have gained support. Furthermore, no new orders are being accepted at this time, leaving backlog orders for 2022 questionable in an already fragile market.
